SUMMARY

Full-Stack Software Engineer with 8+ years of experience — currently Chief AI Officer at Vision Infrastructure Services and former CTO at Budera. I've been building and creating since I was a kid, driven by a passion for solving problems and turning ideas into innovative, user-friendly products. I combine full-stack expertise with AI agent development — moving fast with AI-assisted, vibe-coded prototypes, then doing the experienced cleanup that makes them production-ready.

TECHNICAL SKILLS

Programming	Python (Django, FastAPI, Flask), JavaScript / TypeScript, React.js / Next.js, Node.js, HTML5/CSS3, SASS/SCSS, MUI, Tailwind CSS, Chakra UI
Databases	PostgreSQL, MySQL / MariaDB, MongoDB, Redis
DevOps & Cloud	Docker / Compose, Kubernetes (basic), AWS (EC2, S3, RDS, Lambda), CI/CD (GH Actions, GitLab CI), Linux server management
AI & Automation	LangChain, OpenAI API, GPT-agents, NLP, Pandas / NumPy / Scikit-learn, workflow orchestration, prompt engineering, AI-assisted dev/review/debugging
Tools	Git / GitHub / GitLab / Bitbucket, Jira / Trello / Notion, Postman / Insomnia, Webpack / Vite / Babel, Figma / Adobe XD
Testing	Unit, Integration & E2E, Test-Driven Development (TDD), linting & code formatting
Other	WebSockets / RTC, GraphQL & RESTful API design, payment integrations (Stripe, PayPal), Jupyter (data analysis), Agile / Scrum

WORK EXPERIENCE

Vision Infrastructure Services <i>Chief AI Officer</i>	Mar 2026 – Present
- Lead AI strategy and delivery — agentic systems and AI infrastructure for the business and its clients. - Architect and ship production AI features, combining full-stack engineering with LLM/agent tooling. - Set engineering standards: turning fast AI-assisted prototypes into typed, tested, production-ready systems.	
Agrisun Engineering <i>Senior Software Engineer</i>	Sep 2024 – Present
- Developed software solutions for solar-powered agricultural systems and inverter technologies. - Designed a countertop smart mini-farm prototype with IoT integration for indoor sustainable food production. - Built websites, inventory systems, and marketing analytics dashboards to streamline operations and track impact. - Integrated IoT devices and solar data into centralized platforms for real-time monitoring and decision-making.	
Budera <i>Chief Technology Officer / Senior Software Engineer</i>	Apr 2025 – Aug 2025
- Co-conceived and built the initial product vision for an AI-powered business-partner SaaS. - Designed and implemented 5 independent AI agents that automated diverse business-management tasks. - Architected scalable backend systems for multi-agent orchestration and real-time workflows. - Directed product development from idea to MVP; built the foundation with Python, React, PostgreSQL, LangChain, OpenAI API, and vector DBs.	
Celerus <i>Chief Technology Officer / Senior Software Engineer</i>	Aug 2024 – Jan 2025
- Developed a talent-assessment tool to pre-assess candidates for clients, enabling data-driven hiring. - Built job-scraping and application-automation tools to streamline recruitment workflows. - Delivered advanced analytics, dashboards, and predictive models aligned with business goals. - Created data visualizations in Python and Tableau to provide actionable insights for global clients.	
Empire Syndicate <i>Senior Software Engineer</i>	Oct 2024 – Jan 2025
- Designed custom sales funnels in GoHighLevel, significantly improving client lead conversion. - Automated CRM workflows to enhance customer engagement, retention, and lifecycle management. - Integrated third-party APIs to expand marketing automation and reduce manual effort. - Delivered data-driven insights dashboards that optimized sales strategies.	
Nibret <i>Chief Technology Officer / Senior Software Engineer</i>	Jun 2024 – Aug 2025
- Designed and implemented a full-stack SaaS real-estate platform for web, Android, and iOS. - Built dynamic front-ends with React / Next.js and Material UI; backend APIs for listings, users, and transactions. - Integrated a CRM for client interactions, leads, and property inquiries. - Implemented analytics dashboards, secure authentication, payments, and notifications.	

Independent Contract <i>Software Engineer / Data Engineer</i> - Supported large-scale enterprise clients under NDA, building ETL solutions and pipelines. - Developed a data-pipeline tool to automate ingestion, transformation, and loading of diverse data. - Designed and maintained Apache Airflow workflows for scheduling and orchestrating complex tasks. - Integrated and processed data in Snowflake, ensuring accuracy, accessibility, and scalability.	May 2024 – Sep 2025
ITIO <i>Software Engineer</i> - Built end-to-end web applications with Node.js, React, and MongoDB focused on performance and scalability. - Applied Test-Driven Development to deliver robust backend logic and reduce production bugs. - Developed and maintained data-scraping systems to enrich user experiences and platform content. - Directed deployment of scalable systems for agricultural and IoT use cases.	Aug 2022 – May 2024
Freelance (Upwork) <i>Software Engineer</i> - Delivered 20+ full-stack projects across web and mobile with consistently strong client feedback. - Built rapid prototypes and MVPs with React, Node.js, and Python to accelerate go-to-market. - Integrated APIs and third-party services for e-commerce, automation, and analytics. - Maintained long-term client relationships through reliable, scalable, high-quality delivery.	Jul 2020 – Aug 2022
Independent Contract <i>Software Engineer</i> - Developed real-time monitoring systems for weather, energy, and electricity metrics. - Designed schematics and equipment selection for accurate, efficient field deployment. - Implemented scalable backends for continuous data collection and analysis with secure data handling.	Jun 2019 – Jul 2020
Solar Village Ethiopia <i>IT / Software Engineer</i> - Developed Python-based tools for small-scale agricultural and solar-energy projects. - Built data collection and processing scripts to monitor system performance and efficiency. - Assisted hardware-software integration and built dashboards for project tracking.	Aug 2018 – Jun 2019
Dykesoft <i>IT / Software Engineer</i> - Developed full-stack desktop applications for rental management, inventory, and modular ERP systems. - Designed scalable, secure solutions for data-driven decisions across multi-branch companies. - Provided training, manuals, and support to ensure smooth adoption and client satisfaction.	Jun 2017 – Sep 2018
EDUCATION	
University of Gondar BSc. Biomedical Engineering — Cum Laude (3.6 GPA)	Graduated 2023
